# Care Check

Monitoring for those you care about

*"Help! I am worried about my mom/dad. They don't want to move out of their home and they are not getting any younger. What if something happens to them and I'm not there..."*

If you are concerned about a family member, CareCheck will allow them to stay in their home as long as possible. Our unique service allows you to make sure that they are OK without having to check in on them regularly. This means we provide peace of mind and enable independent living.

## The Benefit

As people get older, they often want to continue to live in the home that they are familiar with, but it may no longer be safe for them to be entirely on their own.

They may not yet need a live-in caregiver or frequent nursing visits but you want to make sure they are OK without having to call them repeatedly or have someone drop in on them frequently.

By being able to confirm that they are well and able to function normally, without being a nuisance to them, you will have enormous peace of mind... and so will they! It's a win-win for both!

## What We Can Do for You

We provide a simple, reliable and low cost service that ensures that you are alerted if something happens to your loved ones or someone you are responsible for. It may be a mental or physical health issue or maybe they've injured themselves and are not able to reach out for help.

## How it Works

The way the service works is very simple. You provide your loved one with a standard smart phone that they keep near them at all times. When they hear or see the alert, they simply press the "I'm OK" button. If they do this within the predetermined time, it means they are OK and the phone will wait for the next scheduled alert time. If they don't acknowledge the alert, an alarm email message will be sent to the selected primary caregiver (often the closest family member). If that person does not acknowledge the email, a second or third person can be automatically notified.

The system can also automatically establish a 2-way voice call so you can communicate directly (and hands-free) to let them know you're OK or if you need help.
